

Timeless Oak

TIMELESS OAK

Quality Oak. Ready to build.

Strings, treads, risers, newel squares and balusters are available ready for you to build.

If you took into account every aspect of producing high grade Oak components you would arrive at a long list of costly processes - planning, purchasing, goods receiving, rip sawing, planing, cross cutting, laminating, waste, left over stock, storage and handling. It wouldn't take Einstein to work out that the cost of all of this is very high and fraught with quality problems. With TIMELESS Oak you have a fixed cost from which you can confidently price the job and the certainty that the quality will be the best possible.

We use white Oak (European and American), carefully selected and graded for the best possible colour match.

Another cost and time saving solution from Clive Durose.
